

Smart Thermostats

Small devices that can
deliver big savings

Almost half of the energy you use in your home goes toward heating and cooling.* That's a big opportunity to make small changes to help lower your energy costs. Here are some smart ways you can manage your energy use:

Check your furnace filter every month and replace it if necessary

Repair air leaks around your windows and doors

Make sure your HVAC vents are not blocked

Consider getting a smart thermostat

We make it easy.

Request a **Quick Home Energy Check-up** or **HVAC Tune-up**, and you could receive a no-cost smart thermostat.† We'll even install it at no cost.

Get up to \$100 in instant rebates when you purchase top-brand thermostats like Google Nest, ecobee, and Sensi through the online **Delmarva Power Marketplace**.

An **ENERGY STAR® certified smart thermostat** can reduce your heating and cooling costs by up to 8% each year.* That's because smart thermostats can:

Learn your habits and preferences and then automatically adjust your home's temperature

Track your energy usage and then provide insights into how you heat and cool your home, which can help you make cost-saving adjustments when you need them

Set a schedule to minimize heating or cooling when no one is home

Use geofencing to detect when no one is home, which can reduce energy waste

Allow you to make temperature adjustments from your phone or other smart device at any time and from anywhere

Go even further with automatic savings.

With **Energy Wise Rewards™**, you'll save automatically when your smart thermostat makes small, energy-saving adjustments during peak times. Plus, you'll earn up to **\$40 a year in bill credits per device**.

To discover more about smart thermostats, scan the code or visit delmarva.com/Therm.

"No-cost, energy-saving upgrades and products? That's an easy yes. I'll help you get started."
